

The Iggelheimer

A modification of the Muniton Rapier by Destrezania

- Total weight: approx. 860 g
- Weight of the blade: approx. 300 g
- PoB of the blade without hilt: approx. 31 cm from Ricasso
- No floppy blade, but good flex
- Small pommel option

This version offers a lighter and more dynamic alternative to the standard Muniton Rapier of Destrezania. It features a lighter blade and a quillon block (escudete or écusson). It is used as the standard within Academia da Espada Deutschland and provides excellent point control, as well as clear and responsive communication in the bind. Furthermore, the good balance and reduced weight makes it especially suitable for practitioners with less grip strength. The use of Destrezania's small pommel is recommended. Overall, this version costs 30,00 Euros more than the standard version.
